

# A Powerful Force in AP<sup>®</sup> Physics 1

Gay Stewart's

## College Physics for the AP<sup>®</sup> Physics 1 Course, Second Edition

**"College Physics for the AP<sup>®</sup> Physics 1 Course** is a text that does an excellent job of simplifying complex materials and of making sure that all of the material is presented both conceptually and concretely. The worked examples in the chapters are excellent and the AP<sup>®</sup> practice is spot on."

**Catherine M. Tabor**

Northwest Early College High School, TX

"Finally a textbook specifically written for AP Physics 1. As an AP<sup>®</sup> Consultant I get asked to recommend textbooks by participants of workshops and Summer Institutes. There are a lot of good college textbooks published, but none has been designed for the High School student taking AP<sup>®</sup> Physics 1. The Stewart text introduces concepts and builds understanding based on Physics Education Research, while taking into account the specific demands of the AP<sup>®</sup> Physics 1 course."

**Patrick Diehl, PhD**

Walworth Barbour American International School, Israel

"Very good text, great examples, great explanations. Easy to read and well explained concepts."

**Robert Watson**

Farmington High School, NM

"This book has been very obviously designed for [the] AP<sup>®</sup> course. Most textbooks available for AP<sup>®</sup> Physics [1] are college texts that have been retrofitted for AP<sup>®</sup> content alignment. This book is designed with AP<sup>®</sup> Physics [1] students in mind."

**Zachary Morgan**

Olympia High School, FL

"The material is treated to an appropriate breadth and depth with an eye towards the expectations of the College Board. Pointers for navigating the AP<sup>®</sup> exam are frequent and appropriate."

**Linus Dolce**

Saint Louis Priory School, MO

"A text that students can read and understand. AP<sup>®</sup> exam parts are amazing. They are helpful and point out things I may forget along the way."

**Amy Morris**

Arkadelphia High School, AR

"It breaks the material down into specific understandable chunks and is very intentional about preparing students for success on the AP<sup>®</sup> test."

**Daniel Olthoff**

Calvin Christian High School, MI

"Great figures and equations with enough practice to actually get ready for the AP<sup>®</sup> Exam."

**Charles Therriault**

Newfound Regional High School, NH
